

AI Career Agent — Setup & Connection Guidebook

Main Commands to Run AI Career Agent

AI Career Agent mainly uses two commands: one command for first-time setup and one command to start the tool after setup is complete.

First-time setup command

Run this command once when setting up the tool for the first time:

```
.\setup_windows.ps1
```

This command prepares the tool environment, installs the required dependencies, creates the virtual environment, and checks whether the setup is ready.

Start the tool

After setup is complete, run this command to start AI Career Agent:

```
.\.venv\Scripts\python.exe run.py
```

Run this command only after completing the rest of the mentioned in the subsequent sections. This opens the AI Career Agent menu. From the menu, you can reconnect Gmail, reconnect LinkedIn, run a manual JD scan, scan Gmail job alerts, and generate evaluation reports.

Simple workflow

Step 1: Run `.\setup_windows.ps1`

Step 2: Complete AI model, Gmail, and LinkedIn setup

Step 3: Run `.\.venv\Scripts\python.exe run.py`

Step 4: Start scanning Gmail job alerts or manually evaluating job descriptions

1. Adding the AI Model API Key in the .env File

- a. You can either enter the API key from your paid LLM provider (OpenAI, Anthropic, Gemini, etc.) or use the OpenRouter portal. This guide uses OpenRouter as the example.

2. Details to Enter

Open the `.env` file from the `final-tool` folder. Use the guide below to fill in the required details.

`AI_PROVIDER_NAME=<Enter the provider name, such as openrouter, openai, gemini, kimi, or glm>`
`AI_API_KEY=<Enter your API key>`

`PRIMARY_MODEL=<Enter the first model name to be used for evaluation>`

`FALLBACK_MODEL=<Enter the second model name to be used if the primary model fails>`

`SECOND_FALLBACK_MODEL=<Enter the third model name to be used if the first two models fail>`

3. Configuring OpenRouter

1. Open OpenRouter.ai: <https://openrouter.ai/>
2. Create your account and workspace.
3. Go to the API key generation page: <https://openrouter.ai/workspaces/default/keys>
4. Click New Key, enter a key name, and click Create. You can use any name for the key.

A screenshot of the OpenRouter API key creation form. The form is titled 'Name' with a help icon. It contains a text input field with the value 'AI Career Agent'. Below this is an 'Expiration' dropdown menu set to 'No expiration'. A 'Key limit' section contains a 'Credit limit (optional)' text input field with the value 'Leave blank for unlimited', and a 'Reset limit every...' dropdown menu set to 'N/A'. A purple 'Create' button is at the bottom right.

5. Copy the API key, save it somewhere safe, and use it in the fields below.
`AI_PROVIDER_NAME=openrouter`
`AI_API_KEY= sk-or-v1-*****`
6. Go to the model page: <https://openrouter.ai/models>
You can choose any free or paid model. The examples below are free models that were available at the time of writing. Free models may change, become unavailable, or hit rate limits.
 - `nvidia/nemotron-3-ultra-550b-a55b:free`
 - `google/gemma-4-26b-a4b-it:free`
 - `nvidia/nemotron-3-super-120b-a12b:free`
7. Copy the model names and paste them into the .env file, as shown below.
`PRIMARY_MODEL=nvidia/nemotron-3-ultra-550b-a55b:free`
`FALLBACK_MODEL=google/gemma-4-26b-a4b-it:free`
`SECOND_FALLBACK_MODEL=nvidia/nemotron-3-super-120b-a12b:free`

Saving Google Credentials

To ensure AI Career Agent runs smoothly, keep an active Google login session available in your browser. This activity will allow you to send the email summary after successful gmail scan run.

Creating a 16-Digit Gmail App Password

1. Go to <https://myaccount.google.com/security>
2. Select 2-Step Verification.
3. Sign in with your existing Gmail or Google account credentials.
4. Scroll to the bottom and open the App Passwords section.
5. Create a new app password. Enter the app name and click Create. Google will generate a 16-digit password.
6. Copy the password before clicking Done. Paste it into a blank document or Notepad temporarily so you do not lose it.

Storing Gmail App Password Details

1. Inside the AI Career Agent folder, open the folder named apps.
2. Then open the folder named gmail-agent.
3. Open the .env.example file in Notepad.
4. Enter the details below.
EMAIL_SENDER=<Enter your email address>
EMAIL_APP_PASSWORD=<Enter the 16-digit app password without spaces, for example:
gxzftestmdusbdef>
EMAIL_RECEIVER=<Enter the email address that should receive the summary>
5. "Save As" the file in the same folder with name .env

Gmail OAuth for Reading Job Alerts

AI Career Agent

Purpose of this Guide

This guide explains how to connect your Gmail account (via OAUTH) to AI Career Agent so the tool can read job-alert emails and extract job links.

Step 1 — Open Google Cloud Console

1. Open Google Cloud Console in your browser: <https://console.cloud.google.com/>
 2. Sign in with the Google account you want to use for Gmail job alerts.
 3. You may use your personal Gmail account or a dedicated job-search Gmail account.
-

Step 2 — Create or Select a Project

In Google Cloud Console:

A. Click the project dropdown at the top.

B. Click Create a new project.

C. Enter the project name and click Create. Suggested project name: AI Career Agent.

D. Select the project you created.

Step 3 — Enable Gmail API

1. In Google Cloud Console:
2. Go to APIs & Services.
3. Open Library.

4. Search for Gmail API.
5. Open Gmail API.
6. Click Enable

Step 4 — Configure the OAuth Consent Screen

In Google Cloud Console:

- A. Go to Google Auth Platform or OAuth consent screen.

- B. Click Get Started and enter the details below.
- C. Fill in the required app details:
- App name: AI Career Agent
 - User support email: your email
 - Developer contact email: your email
- D. Choose user type: **External** for personal Gmail accounts.
- E. Enter your email address under Contact Information, then click Save and continue.
-

Step 5 — Create OAuth Client ID

In Google Cloud Console:

- A. Go to Google Auth Platform → Clients or APIs & Services → Credentials.

- B. Click Create Client or Create Credentials → OAuth client ID.

- C. Choose the application type: Desktop app.
4. Name it AI Career Agent Desktop, or enter any other name you prefer.
5. Click Create.
-

Step 6 — Download the JSON File

After creating the Desktop OAuth client:

A. Click Download JSON.

B. Save the file and rename it to `credentials.json`. Do not change this final file name.

C. Copy the downloaded file into your AI Career Agent folder as:

`apps/gmail-agent/credentials.json`

Step 7 — Run Gmail Reconnect

From the AI Career Agent folder, run the following command:

Windows

```
python run.py
```

or:

```
.\.venv\Scripts\python.exe run.py
```

macOS

```
python3 run.py
```

When the menu appears, choose:

Reconnect Gmail

The browser should open and ask you to sign in to Google.

Google's Gmail Python quickstart explains that the first run prompts the user to authorize access in the browser and then stores authorization information in `token.json` for future runs.

Step 8 — Approve Gmail Access

In the browser:

- D. Select the Gmail account used for job alerts.
- E. Review the permissions.

- F. Click **Allow** or **Continue**.
- G. Close the browser window after authorization is complete.

After successful authorization, AI Career Agent should create this file:

apps/gmail-agent/token.json

The Gmail status should then become:

Gmail Connection [OK]

Step 9 — Confirm Gmail Is Connected

Run:

```
python run.py
```

The startup check should show:

Gmail Connection [OK]

If it shows:

Gmail Connection [RECONNECT_REQUIRED]

choose Reconnect Gmail again.

LinkedIn Connection

1. Opening the LinkedIn Browser Window

- A. Select the Reconnect LinkedIn option.
- B. Enter your LinkedIn credentials when the browser window opens.

- C. After LinkedIn login is successful, close the browser window and press Enter in the terminal.
